Re: Recommendation for Miss Grace Akinyi – Bachelor of Science in Computer Science

Dear Members of the Admissions Committee,

I am pleased to recommend Miss Grace Akinyi for admission to the Bachelor of Science in Computer Science. I taught Grace Information and Communication Technology (ICT) for two years at Greenfield Secondary School, where I observed her approach to learning, problem-solving, teamwork, and independent work. My recommendation is based on her performance in class and on the practical tasks I supervised.

Grace demonstrated a strong ability to connect classroom concepts with practical applications. During a project, she developed a simple browser-based library book-tracking prototype using HTML, CSS, and JavaScript. The prototype allowed users to view and search a small set of sample book records. When she discovered that searches did not return expected results if a user entered a title with different capitalization, she investigated the issue, adjusted the search logic, and tested it with several examples. What impressed me was not that the first version was perfect, but that she approached the problem methodically and used testing to improve her work.

Her performance in database lessons was similarly encouraging. In a group exercise, students organized sample library records and considered how books, borrowers, and loans could be represented. Grace helped her team identify inconsistent entries, explain why related information should be structured carefully, and check that the proposed tables represented the task clearly. She contributed without taking over the work, and she explained her reasoning in a way that helped another student understand the relationship between the records.

Beyond completing assigned work, Grace showed curiosity about how websites process information and how databases support everyday digital services. She asked relevant questions, sought clarification when a concept was unfamiliar, and was willing to revisit a

task rather than settle for an answer she did not understand. These habits—persistence, logical reasoning, attention to detail, and a willingness to learn independently—are important foundations for the study of computer science.

A Bachelor of Science in Computer Science would give Grace the opportunity to build on this foundation through more advanced study of programming, algorithms and data structures, databases, and software engineering. I believe she would benefit from a learning environment that combines theory with practical projects, and I expect she would approach that work with the same patience and constructive attitude I observed in class. In the longer term, these skills could help her contribute to the development of useful digital tools, including services that improve access to information and education.

Grace's strengths are not limited to technical tasks. In collaborative work, she listens to others, shares ideas respectfully, and follows through on agreed responsibilities. She is receptive to feedback and uses it to improve the quality of her work. These qualities would help her contribute positively to both classroom discussions and team-based projects at university.

I recommend Grace for consideration for admission to the Bachelor of Science in Computer Science. While university study will present new challenges, the evidence I have seen gives me confidence in her capacity to learn, respond constructively to difficulties, and develop her abilities through sustained effort. I believe she has the motivation and potential to make good use of this opportunity.

Yours sincerely,

Mr Daniel Otieno
